moral philosophy is the discipline concerned with what are ethically good and bad or right and wrong the term is also applied to any system or theory of moral values or principles as this is a subject for thinking questions are asked and answers are sought how should we live shall we aim at happiness or at knowledge virtue or the creation of beautiful objects if happiness is chosen will it be our own or for all what of the more particular questions that face us is it right to be dishonest in a good cause can we justify living in opulence while elsewhere in the world people are starving if conscripted to fight in a war we do not support should we disobey the law what are our obligations to the other creatures with whom we share this planet and to the generations of humans who will come after us ethics deals with such questions at all levels its subject consists of the fundamental issues of practical decision making and its major concerns include the nature of ultimate value and the standards by which human actions can be judged right or wrong the terms ethics and morality are closely related we now often refer to ethical judgments or ethical principles where it once would have been more common to speak of moral judgments or moral principles these applications are an extension of the meaning of ethics strictly speaking however the term refers not to morality itself but to the field of study or branch of inquiry that has morality as its subject matter in this sense ethics is equivalent to moral philosophy although ethics has always been viewed as a branch of philosophy its all embracing practical nature links it with many other areas of study including anthropology biology medicine economics history politics psychology sociology and theology yet ethics remains distinct from such disciplines because it is not a matter of factual knowledge in the way that the sciences and other branches of inquiry are rather it has to do with determining the nature of normative theories and applying these sets of principles to practical moral problems the brief historical survey of western ethics from socrates to the 20th century has shown three constant themes since the sophists there have been disagreements over whether ethical judgments are truths about the world or only reflections of the wishes of those who make them frequent attempts to show in the face of considerable scepticism either that it is in one's own

interests to do what is good or that even though this is not necessarily in one's own interests it is the rational thing to do repeated debates over just what goodness and the standard of right and wrong might be the 20th century has seen new twists to these old themes and an increased attention to the application of ethics to practical problems each of these major questions is considered below in terms of meta ethics normative ethics and applied ethics perhaps the greatest legacy of ethics as an application to a profession is what Hippocrates has structured as a code of ethics some two and a half thousand years ago during the golden age of Hellenism

originally published in 1985 this book establishes that moral discourse is critical rational and objective and challenges the ideology of value irrationalism behind contemporary liberalism the book discusses the origins of the fact value distinction and calls into question the thesis that logical derivability or strict implication is the only legitimate relationship between propositions a straightforward philosophical treatment of the subject in the analytical tradition it will be especially useful for undergraduate students
